

# Remote Visual Inspection

GE's Inspection Technologies (GE IT) offers a comprehensive selection of non-destructive testing (NDT) remote visual inspection (RVI) equipment – from basic borescopes and fiberscopes to measurement capable digital video borescopes, and pan-tilt-zoom (PTZ) camera systems – GEIT has the right NDT visual inspection equipment for your needs for any industry. Our systems are portable and ruggedly built, to survive the rigors of industrial environments.

## VIDEOSCOPIES

GE IT's comprehensive offering of technologically advanced video borescopes are diverse to meet your application-specific needs. The systems are designed for ease of use while delivering video images of unsurpassed quality. Distinguished by an intuitive, patented joystick and one-handed operation, the VideoProbe® systems feature an integrated LCD video display and a variety of imaging and measurement functions. Engineered for durability and available in many diameters and lengths, video borescopes can be used for a wide range of industry applications.

## LIGHT SOURCES

A full range of Solarc®-powered metal-halide light sources work in tandem with rigid borescopes and fiberscopes. This patented lamp technology delivers superior images by uniformly illuminating the entire viewing range with high quality, white light. Also available are conventional 300-watt xenon lamps and high intensity UV models.

# Remote Visual Inspection

Rotary Scan Rigid Borescope

Swing-Prism Borescope

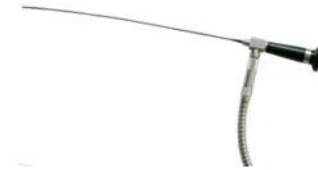

Mini-Rigid Borescope

## RIGID BORESCOPIES

The selection of rigid borescopes includes Rotary Scan, Swing Prism, and Mini Rigid designs. To enhance the versatility and performance, choose from a broad selection of accessories including eyepiece adapters, video borescope adapters, monitors, recording devices, light guides and light sources.

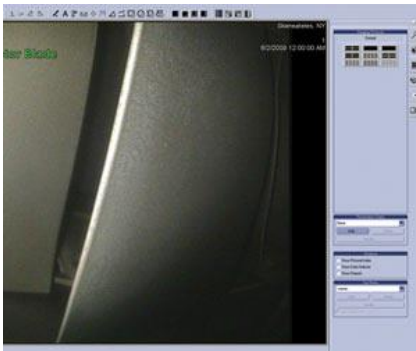

Articulating Fiberscope

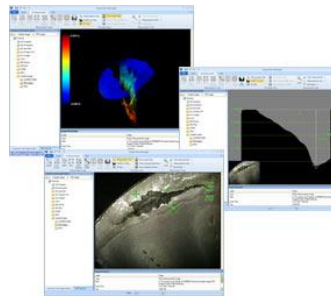

Mini-Flex Fiberscope

## FIBERSCOPES

GE IT's high-resolution articulating fiberscopes features 7-micron diameter, densely-packed, imaging fibers to reveal more detail than any other scopes. The line of flexible fiberscopes is available in various configurations for any application.

Rhythm® Visual

Inspection Manager

MDI

iView

## SOFTWARE

RVI NDT software range includes Rhythm® Visual, a state-of-the-art image acquisition, review and data management solution, Menu Directed Inspection (MDI) for guided inspection and automatic report generation, Inspection Manager for image re-measurement and iView Remote for remote control.
